

The Power of Ultrasound

Diagnostic medical ultrasound, when used by proficient and certified medical professionals, can be a safe and inexpensive tool to detect and diagnose medical conditions in men, women, children, infants, and fetuses. The use of ultrasound by inexperienced or untrained medical professionals, however, can lead to incorrect or missed diagnosis for countless patients. Inteleos, through its Proficiency Grand Challenge program, wants to assure that every provider has the demonstrated knowledge and skills to provide optimal care to all their patients. For more information, please visit Inteleos.org/grandchallenge.

About Inteleos:

Inteleos is a global nonprofit certification organization dedicated to establishing ultrasound standards through the validation of knowledge and skills of healthcare providers.
